

Land Buddy

A land access app

Austin Dollar
Fall 2021

PROJECT OVERVIEW

This project is similar to the app 'AirBnB' but is used for land access rather than usage of a home. It allows for landowners to post the details of their property, while renters can view these properties, select one, and schedule a "stay," or a time in which they are allowed access to the property.

This project was made with the goal of allowing hunters to get access to private property, however, it can be used by anyone who wants access to private property for any purpose, such as camping, fishing, hiking, etc.

This first deliverable has no payment processing or the like to pay for this access, however, it is a stretch goal.

HOW IT WORKS

- Upon launching of the app, users can register for an account, which by default is a "renter" account
- Renters can view a list of properties available for booking, select a property and book a stay, and then view scheduled stays in their calendar.
- The profile page allows a user to switch to an owner (re logging in currently required to take effect)
- Owners can view a list of all properties, a list of their properties, create a new property listing, and view a calendar of scheduled stays on any of their properties
